**ChemScan UV-Series Analyzers**

**Features:**
- Can be configured for monitoring single or multiple samples and parameters
- Real-time Spectrographic chemical analysis using advanced pattern recognition techniques
- Easily interfaced to SCADA systems (4-20mA, MODBUS or Ethernet)
- Extensive internal data logging
- Self monitored diagnostics and alarms
- Internal manifold with inlets for auto zeroing
  auto cleaning and calibration samples

**Potable Water Monitoring:**
- Chloramination Monitoring
- Water Blending
- Organics Detection
- Nitrification Avoidance

**Wastewater Nutrient Monitoring**
- Nitrification Analysis
- De-Nitrification Control
- Chem or Bio Phosphorous Removal
- Nutrient Deficiency Analysis
- SBR End Point Detection
- Alkalinity Monitoring

ChemScan on-line analyzers provide operators and control systems with timely process chemistry measurements. These data are used to control and optimize the process; resulting in increased plant capability, reduced energy and chemical usage along with monitoring the process for compliance.

*Only 2 with filters, **Only 4 with filters

**Monitor process, reduce energy and chemical costs, meet limits.**
Accurate, Reliable AND Affordable Single Parameter Analysis

Capabilities:
- Continuous, Real Time Analysis of Constant Flow Sample Stream
- Isolated Analog Output

Features:
- Long Life LED Light Source
- Low Maintenance
- Large I.D. Flow Paths
- Simple Field Adjustable Calibration
- Direct Diode Detection
- Sealed Electronics Enclosure
- Auto Cleaning and Zeroing
- No Lamp Replacement or Alignment Required

No Filtration Required
- When TSS < 150 mg/L
- After Secondary Clarifier

The Fond du Lac Wisconsin Regional Wastewater Treatment Facility has saved thousands in chemical costs.

The Fond du Lac facility, with an average flow of 9.8 MGD, treats all of the city’s wastewater along with that of neighboring communities. For the last three years, the facility has used a ChemScan mini to monitor the chemical feed pump that doses Aluminum Sulfate for Phosphate removal. Jeremy Cramer, Operations Manager for the plant, reports “Alum cost savings of approximately $100,000 per year have been realized.” In the last 6 months, the unit has been tied directly to the chemical feed pump via their SCADA system. The system ramps the chemical dosing up and down as needed. “We are on pace to save approximately $50,00 more per year.” This results in a total savings estimated at $150,000 per year.

ChemScan Alkalinity Analyzer

Reliable Alkalinity Analysis in Wastewater

The ChemScan Alkalinity Analyzer provides consistent, reliable chemical analysis for process control and optimization in multiple stream process monitoring and/or difficult or dirty samples.

The ChemScan Alkalinity Analyzer is easy to operate and maintain with minimal training and provides continuous real-time online analysis enabling chemical composition measurement of liquid processes.

- Fully automatic mode for routine monitoring of process streams
- Integrated, field proven, filtration system
- Modbus RS 232, Modbus RS 485, Modbus TCP/IP communications for downloading calibrations, analysis and setup data (to printer or computer)
- Digital input control for remote control operation of analysis and calibration
- Rugged design for long life under harsh operating conditions
- Internal sample fast loop and rapid reaction electrodes provide fast analyzer response for efficient process control
- Easy to operate with menu-driven selections
- Modular design provides quick access and easy maintenance throughout

Support Services
From installation to replacement parts, Chemscan, Inc. provides responsive service by qualified personnel.
