**The Fond du Lac Wisconsin Regional Wastewater Treatment Facility has saved thousands in chemical costs.**

The Fond du Lac facility, with an average flow of 9.8 MGD, treats all of the city’s wastewater along with that of neighboring communities. For the last three years, the facility has used a ChemScan mini oP to monitor the chemical feed pump that doses Aluminum Sulfate for Phosphate removal. Jeremy Cramer, Operations Manager for the plant, reports “Alum cost savings of approximately $100,000 per year have been realized.” In the last 6 months, the unit has been tied directly to the chemical feed pump via their SCADA system. The system ramps the chemical dosing up and down as needed. “We are on pace to save approximately $50,000 more per year.” This results in a total savings estimated at $150,000 per year.
